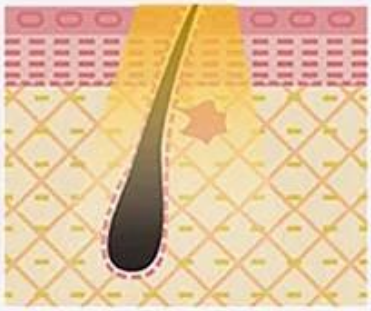
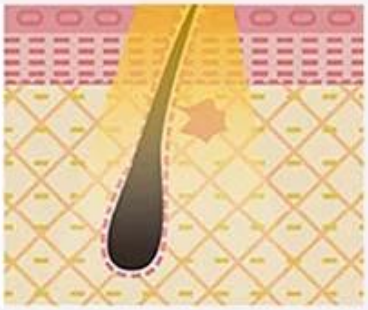
What is diode laser hair removal?

Alma soprano xl titanium Diode laser hair removal comes with 808nm wavelength laser stack or 755+808+1064 triple wavelengfth laser stack with semiconductors technology. They are assembled together to produce light for permanent hair removal/hair reduction/depilation/epilation treatment!



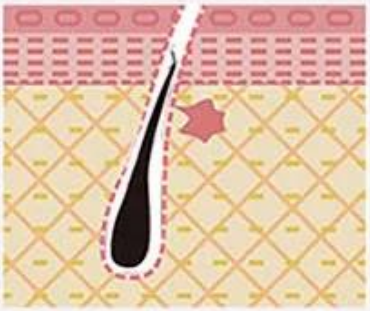
Emit a laser beam

The laser beam is absorbed by hair follicle melanin

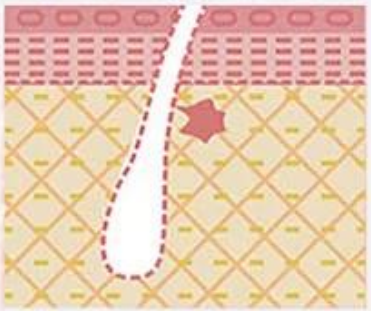


Different color hair has different ability to absorb light wave

After absorption, the laser energy will be converted into heat energy



Hair follicles and surrounding stem cells lose their activity and fall off



So reach hair removal effect
