PRINCIPLE

HOW IT WORKS

EMSCULPT with HIFEM technology induces supramaximal muscle contractions not achievable by voluntary action. When exposed to supramaximal contractions, the muscle tissue is forced to adapt to such extreme condition.

The muscle responds with a deep remodeling of its inner structure, i.e., the growth of myofibrils (muscle hypertrophy) and creation of new protein strands and muscle fibers (muscle hyperplasia).

The process results in increased muscle density and volume.

EASY TO OPERATE

RANDOMLY ADJUST MORE INTELLIGENT

NEW APPEARANCE

REASONABLE DESIGN

PRODUCT DETAILS

SAFE AND CONVENIENT

HANDLE

The handles support independent and synchronous work

POWER LOCK

Prevent the power supply from falling out, causing damage to the machine

SHELF

Put the tools you can use

STRAP STORAGE

The handles support independent and synchronous work

OPERATING PARTS

The location of the handle operation must be consistent with the interface selection location
