6-10cm

You think you can. you can
No one can stop me

Q-switch laser treatment is a non-invasive procedure that uses a laser to break down pigment in the skin. It is commonly used for tattoo removal, but it can also be used to treat other types of pigmentation, such as freckles, sun spots, and birthmarks. The procedure is typically performed in a series of sessions, and the results are usually visible within a few weeks.
