# WORKING PRINCIPLE

The CO2 laser uses a unique head piece which tracks the CO2 10.6 um wavelength light as it passes light through its optical lens to penetrate the skin. We can control the depth of the penetration from only a few micrometers in depth (only as deep as a few sheets of paper) to much deeper with tiny thermal channels. This will also determine the length of healing, the number of treatments and the cost. Each thermal channel creates a small micro-injury but does not significantly disturb or disrupt the surrounding tissue.

These microscopic injuries caused by the laser (around 15-20% of the treated area) are the beginning of the healing process. By creating thousands of these perforations underneath the skin, your epidermis layer starts to heal from the edge of these microscopic perforations very quickly. By healing so fast it remodels, tightens and stimulates the collagen, your skin tightens, which in turn smooths out lines, and significantly improves your skin's tone and complexion.

3. CO2 laser treatment is a non-invasive procedure that uses a laser beam to remove the top layer of skin, which is then replaced by new skin cells. This process stimulates collagen production, which helps to reduce wrinkles and improve skin texture. The treatment is typically performed in a series of sessions, and the results are long-lasting.

Use an articulate arm probe with automatically 360° rotation technology, producing in 50-70° C at a controlled depth inside the vaginal mucosa - stimulates collagen contraction, restructuring and regeneration; promotes collagen fiber proliferating, remodeling; improves vaginal mucosa microcirculation; increases cell secretion and dynamic reaction function; corrects PH value of vaginal inside;

Therapeutic schemes

Improves the inside environment; achieve female private parts to significant lasting firming, nourishing and restoring harmonious sexual life. The laser has a photo thermal heating effect on collagen in both the vaginal walls and the urethra which causes restructuring and regrowth of the collagen. This results in thickening and tightening of the vaginal walls and urethra to improve atrophy and prevent urine loss.

## German import scanning head

- **Longer life span**

Imported scanning heads generally use for 3 - 5 years, with low failure rate, more accurate scanning and long service life.

- **Strong energy, more accurate**

Strong energy, uniform light emission, more accurate scanning, lower failure rate and long service life.

- **Scanning accuracy**

The scanning rate of import is more accurate

## Section 7 light guide arm

- **counter weight**

Light guide arm adopts counter weight design, which makes it more flexible to use and convenient to operate.

- **Aluminium material**

The light guide arm is made of high-grade aluminum, which has high stability and is lighter.

- **Tri - color optional**

Equipped with silver, red and blue light guide arms, it can meet different preferences of customers.

## Five therapeutic heads

Equipped with scanning head \* 1 / cutting head \* 1 / private head \* 3

- **Scanning head efficacy**

Tender skin/shrink pores/remove striae gravidarum and chloasma

- **Cutting head efficacy**

Removing sarcoma / nevus

- **Efficacy of private head**

Tighten vagina / tender vulva / tender vulva

scanning head

cutting head

private head

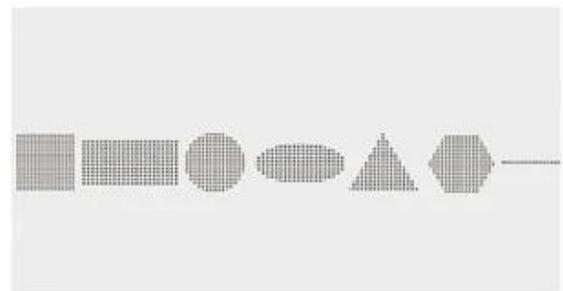

- **Trachea**

When working, gas is sprayed out, which has the functions of cooling, cooling and dust removal.

- **Adjustable dot shape and size**

- **Shape display**
