In addition to the shell, the all-metal internal structure is firmer and has long service life.

该设备采用先进的射频技术，能够实现精准的能量输出。设备配备5个30mm的射频管，确保治疗区域覆盖全面。此外，设备还具备智能温控系统，可实时监测温度变化，防止过热损伤组织。

40W功率输出，适用于多种组织类型。设备采用全金属内部结构，具有极高的稳定性和安全性，使用寿命长达10年以上。操作简便，医生可通过触摸屏轻松调整各项参数。

该设备已通过国家药品监督管理局认证，符合相关安全标准。广泛应用于临床治疗，效果显著，是医生进行微创手术的理想选择。

WORKING PRINCIPLE

The CO₂ laser uses a unique head piece which tracks the CO₂ 10.6 μ m wavelength light as it passes light through its optical lens to penetrate the skin. We can control the depth of the penetration from only a few micrometers in depth (only as deep as a few sheets of paper) to much deeper with tiny thermal channels. This will also determine the length of healing, the number of treatments and the cost. Each thermal channel creates a small micro-injury but does not significantly disturb or disrupt the surrounding tissue.

These microscopic injuries caused by the laser (around 15-20% of the treated area) are the beginning of the healing process. By creating thousands of these perforations underneath the skin, your epidermis layer starts to heal from the edge of these microscopic perforations very quickly. By healing so fast it remodels, tightens and stimulates the collagen, your skin tightens, which in turn smooths out lines, and significantly improves your skin's tone and complexion.
