

Quick burst melanin

Pulse intelligent regulation

Safe and effective

Light guide arm imported from South Korea

Light guide arm imported from South Korea

• Life can reach 5 million times

Long service life, up to 5 million exposures, to better meet customer needs.

• Aluminum

Equipped with high-quality aluminum light guide arm, quality is guaranteed

• Counterweight

The light guide arm adopts a counterweight design, which makes the operation more flexible and convenient

Light guide arm imported from South Korea! The light guide arm is made of high-quality aluminum, which is durable and has a long service life. It can reach up to 5 million exposures, which is much longer than other products. The light guide arm is equipped with a counterweight design, which makes the operation more flexible and convenient. The light guide arm is also equipped with a pulse intelligent regulation function, which can adjust the pulse width and frequency according to the skin condition. The light guide arm is also equipped with a quick burst melanin function, which can quickly remove melanin from the skin. The light guide arm is also equipped with a safe and effective function, which can ensure the safety of the operation. The light guide arm is also equipped with a high-quality aluminum light guide arm, which is guaranteed to be of high quality. The light guide arm is also equipped with a pulse intelligent regulation function, which can adjust the pulse width and frequency according to the skin condition. The light guide arm is also equipped with a quick burst melanin function, which can quickly remove melanin from the skin. The light guide arm is also equipped with a safe and effective function, which can ensure the safety of the operation. The light guide arm is also equipped with a high-quality aluminum light guide arm, which is guaranteed to be of high quality.

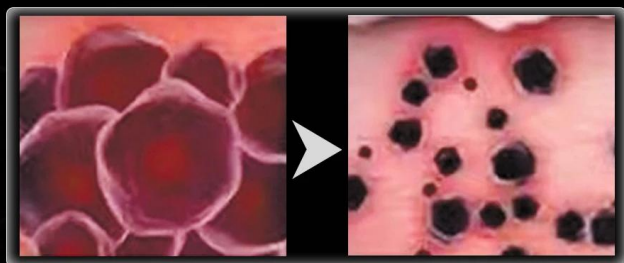

Product advantage

- ⬆ Fast and scar-less
- ⬆ imported 7 joint articulated arm 360 treatment without dead angle and ensure the highest energy output minimum energy loss during laser transmission.
- ⬆ The combination different laser pulse durations ,Provide an optimal method for shattering all sizes of pigment particles.
- ⬆ Spots no longer appear
- ⬆ 2-10mm adjustable spot size Different treatment areas are applicable Energy density is automatically adjusted with spot size.

Technical principle

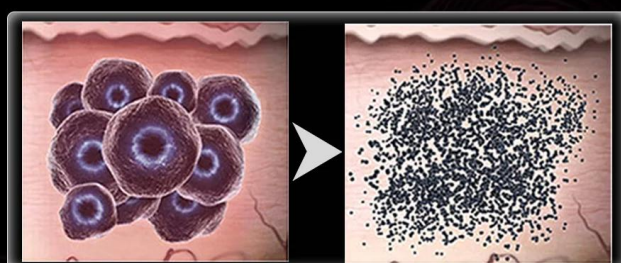

Technical principle: 1. The Ruby laser is a type of laser that can be used for tattoo removal. It is a type of laser that can be used for tattoo removal. 2. The laser is used to break down the tattoo ink into small particles. 3. The laser is used to break down the tattoo ink into small particles. 4. The laser is used to break down the tattoo ink into small particles. 5. The laser is used to break down the tattoo ink into small particles.

TECHNICAL PRINCIPLE

Traditional laser

Traditional nanosecond lasers predominately rely on photothermal action, delivering heat to the pigment and surrounding tissue

Laser luxe

Laser luxe takes advantage of Pressure Wave Technology to shatter the target ink into tiny particles that are easily

1064nm Nd:YAG laser is a versatile medical device used for various dermatological treatments. It is known for its effectiveness in treating pigmented lesions, vascular lesions, and skin rejuvenation. The device operates at three wavelengths: 1064nm, 755nm, and 532nm. The 1064nm wavelength is used for deep penetration, treating issues like melasma and deep wrinkles. The 755nm wavelength is used for skin rejuvenation and treating vascular lesions. The 532nm wavelength is used for treating pigmented lesions like freckles and sun spots. The device is equipped with a large 12-inch 4K touch screen for easy operation and a 7-articulated arm for flexible treatment of different body parts. It also features a 650nm red diode laser for aiming and cooling systems (water and air) to ensure patient comfort and safety. The machine is compact, with dimensions of 93.6*92.7*39cm, and is housed in an aluminum box with a 2-year warranty.

Before & After

Parameters Table

Device Name	Laser luxe
Wavelength	1064nm 755nm 532nm
Screen Size	12 inch 4K Style touch screen
Pulse Duration	~7ns@1064nm ~6.5ns@532nm
Frequency	1-10hz
Spot size	2-10mm adjustable
Energy	1064/1000mj 755/1000mj 532/1000mj
Beam of light transmission	7 articular-arm of light guide transmitting
Indicator of aiming light	650 red diode laser
Cooling	Water cooling+Air cooling
Voltage	AC220V/110V 50HZ/60HZ
Demension of machine	93.6*92.7*39cm
Package	Aluminum box
Warranty	2 years

Q-switched Nd:YAG laser is a medical device used for various dermatological treatments. It is known for its effectiveness in treating pigmented lesions, vascular lesions, and skin rejuvenation.
