2. 如何计算 CO2 排放量:

Figure 1. The effect of CO₂ concentration on the growth of *Chlorella* sp. under continuous culture. The growth rate (OD₆₀₀/h) was measured at different CO₂ concentrations (0, 10, 20, 30, 40, 50, 60, 70, 80, 90, 100%) in a continuous culture system. The growth rate was significantly higher at 50% CO₂ concentration compared to other concentrations. The growth rate was significantly lower at 0% CO₂ concentration compared to other concentrations. The growth rate was significantly higher at 100% CO₂ concentration compared to other concentrations.

WORKING PRINCIPLE

The CO₂ laser uses a unique head piece which tracks the CO₂ 10.6 μ m wavelength light as it passes light through its optical lens to penetrate the skin. We can control the depth of the penetration from only a few micrometers in depth (only as deep as a few sheets of paper) to much deeper with tiny thermal channels. This will also determine the length of healing, the number of treatments and the cost. Each thermal channel creates a small micro-injury but does not significantly disturb or disrupt the surrounding tissue.

These microscopic injuries caused by the laser (around 15-20% of the treated area) are the beginning of the healing process. By creating thousands of these perforations underneath the skin, your epidermis layer starts to heal from the edge of these microscopic perforations very quickly. By healing so fast it remodels, tightens and stimulates the collagen, your skin tightens, which in turn smooths out lines, and significantly improves your skin's tone and complexion.

3. CO₂ laser treatment is a non-invasive procedure that improves skin texture and tone.

Use an articulate arm probe with automatically 360° rotation technology, producing in 50-70° C at a controlled depth inside the vaginal mucosa - stimulates collagen contraction, restructuring and regeneration; promotes collagen fiber proliferating, remodeling; improves vaginal mucosa microcirculation; increases cell secretion and dynamic reaction function; corrects PH value of vaginal inside;

Therapeutic schemes

Improves the inside environment; achieve female private parts to significant lasting firming, nourishing and restoring harmonious sexual life. The laser has a photo thermal heating effect on collagen in both the vaginal walls and the urethra which causes restructuring and regrowth of the collagen. This results in thickening and tightening of the vaginal walls and urethra to improve atrophy and prevent urine loss.

4. CO2 laser treatment:

German import scanning head

• Longer life span

Imported scanning heads generally use for 3 - 5 years, with low failure rate, more accurate scanning and long service life.

• Strong energy, more accurate

Strong energy, uniform light emission, more accurate scanning, lower failure rate and long service life.

• Scanning accuracy

The scanning rate of import is more accurate

Section 7 light guide arm

• counter weight

Light guide arm adopts counter weight design, which makes it more flexible to use and convenient to operate.

• Aluminium material

The light guide arm is made of high-grade aluminum, which has high stability and is lighter.

• Tri - color optional

Equipped with silver, red and blue light guide arms, it can meet different preferences of customers.

Five therapeutic heads

Equipped with scanning head * 1 / cutting head * 1 / private head * 3

• Scanning head efficacy

Tender skin/shrink pores/remove striae gravidarum and chloasma

• Cutting head efficacy

Removing sarcoma / nevus

• Efficacy of private head

Tighten vagina / tender vulva / tender vulva

scanning head

cutting head

private head

• Trachea

When working, gas is sprayed out, which has the functions of cooling, cooling and dust removal.
