

## WORK THEORY

1 Non-invasive HIEMT procedure induces powerful muscle contractions not achievable through voluntary contractions. When exposed to strong contractions, the muscle tissue is forced to adapt to such extreme condition. It responds with a deep remodeling of its inner structure that results in muscle building and sculpting your body.

2 At the same time, the 100% extreme muscle contraction of HI-EMT technology can trigger a large amount of fat decomposition excreted by the body's normal metabolism within a few weeks. Therefore, slim beauty machine can strengthen and increase muscle, and reduce fat at the same time.

Focused electromagnetic field with safe intensity to pass through the body and interact with motor neurons. Magnetic lean provides the body with severe maximum contraction stimulation. The repeated contraction of muscle consumption metabolizes excess fat, reconstructs the internal structure, makes the production of muscle protein and muscle fiber chain, and creates higher density and muscle volume.
