Working Principle

755nm and 808nm and 1064nm , suits for all skin and hair types.

ALEX 755nm

For white skin

(fine, golden hair removal)

SPEED 810nm

For yellow neutral skin

(brown hair removal)

YAG 1064nm

For black skin

(black hair removal)

The figure consists of four clinical photographs arranged in a 2x2 grid, comparing skin conditions before and after laser treatment for hyperhidrosis. The top row shows the back of the hand, and the bottom row shows the forearm. The left column is labeled 'Before' and the right column is labeled 'After'.

- Top Left (Before):** Shows the back of the hand with visible, fine, and numerous sweat droplets on the skin surface.
- Top Right (After):** Shows the same area of the back of the hand after treatment, with a smooth, dry, and clear skin surface.
- Bottom Left (Before):** Shows the forearm with a large, dense, and dark area of hyperhidrosis, where the skin is wet and the hair is matted.
- Bottom Right (After):** Shows the same area of the forearm after treatment, with a significantly reduced area of hyperhidrosis, appearing much drier and less irritated.
