

*Uses high intensity electromagnetic technology, which has the ability to induce supramaximal muscle contractions.

*The Rapidly Changing Magnetic Field induces electric waves in the tissue where it polarizes neural membranes and governs motor units in the target muscle tissue, causing concentric contractions.

*During treatment, the muscles are contracted to supramaximal levels. Intensive supramaximal contractions enhance release of epinephrine which triggers a cascade effect leading to supramaximal lipolysis in fat cells.

*Meanwhile, responds with a deep remodeling of its inner structure, induces the growth of myofibrils (muscle hypertrophy), the creation of new protein strands and the growth of muscle fibers (muscle hyperplasia). The process results in increased muscle density and volume.
