*Utiliza tecnologia eletromagnética de alta intensidade, que tem a capacidade de induzir contrações musculares supramáximas.

*O Campo Magnético de Mudança Rápida induz ondas elétricas no tecido onde polariza as membranas neurais e governa as unidades motoras no tecido muscular alvo, causando contrações concêntricas.

*Durante o tratamento, os músculos são contraídos a níveis supramáximos. As

contrações supramáximas intensivas aumentam a liberação de epinefrina, que desencadeia um efeito cascata que leva à lipólise supramáxima nas células adiposas.

*Entretanto, responde com uma profunda remodelação da sua estrutura interna, induz o crescimento de miofibrilas (hipertrofia muscular), a criação de novas cadeias proteicas e o crescimento de fibras musculares (hiperplasia muscular). O processo resulta em maior densidade e volume muscular.

PRINCIPLE

HOW IT WORKS

EMSCULPT with HIFEM technology induces supramaximal muscle contractions not achievable by voluntary actionWhen exposed to supramaximal contractions, the muscle tissue is forced to adapt to such extreme condition.

The musle responds with a deep remodeling of its inner structure, i.e, the growth of myofibr ils (muscle hypertrophy)and creation of new protein strands and muscle fibers (muscle hyperplasia).
